

Please see the latest update for the catchment.

The catchment levels are dropping rather quickly now and as a result **we have been able to reduce the number of tankers in East Dean from five to two.**

Over the past week, our manhole-sealing team have been working outside the groundwater area, as well as private inspection chambers that were allowing infiltration into the network. As result of their findings, we will arrange a remedial plan to have these sealed as soon as possible.

At this stage, we have **not** identified any failed sewer sealing works.

Progress Update:

- **The crews have sealed approximately 145.5m of public and private sewer in Singleton and East Dean this week.**
- **This brings the total sealed to date to around 11,857m across both public and private sewer networks.**

Aside from the above, it's business as usual as we continue progressing with the task at hand.

I've also included the **borehole data from Chilgrove** below which shows the ground water levels for your reference.

The ground water continues to fall and we will monitor this to find more localised issues created by this years ground water season.

We will continue to investigate and fix as we find the issues as quickly as possible to get the tankers away from the catchment.
